SUMMARY

Technical co-founder and CTO who takes products from first commit to production on his own (architecture, infrastructure, payments, Mexican tax compliance, AI agents) and has led a team of ~10 engineers.

EXPERIENCE

Octagon Labs — Venture studio that builds and operates software companies — Jan 2025 – Present
Co-Founder & CTO — Monterrey

- Built HQ, the operations console and agent control plane (24 tables, 354 tests, 25-command CLI); it replaced 3 legacy systems through a migration that passes 25/25 verification checks.
- Designed and operate 6 autonomous browser agents on 18 systemd timers (headless Claude Code driving real Chrome): 1,677 recorded runs, 7,549 leads (4,798 qualified) in 4 countries, ~1,700 AI-written emails sent.
- Agent guardrails live in tested TypeScript, not prompts: no agent-written SQL; dedupe, budgets, send guard.
- Run 24 production processes on a self-hosted server: CI/CD with automatic rollback, daily verified backups.

Turboship — Multi-carrier shipping platform, Mexico — Nov 2023 – Present
Co-Founder & CTO — Monterrey

- Built Turboship Carrier, the multi-tenant B2B shipping SaaS, from the first commit: 2,047 commits (~99.7% authored personally), ~192k lines of TypeScript, 18 carriers via 47 provider integrations.
- One codebase serves 9 white-label resellers and 852 business customers: ~1.6M shipments and ~$257.7M MXN processed and billed across the network in 13 months (Jul 2025 – Jul 2026).
- Owned payments and Mexican tax compliance: STP/SPEI reconciliation, CFDI e-invoicing, Mercado Pago.
- Shipped Turboship WMS as a second product (1,088 commits, ~311k lines in ~15 months) and made white-label provisioning an AI-agent skill: database, CDN, Vercel project, email domain and first deploy in one run.

Terpa Solutions — Payments fintech: card terminals for vending, micromarkets, parking and kiosks — Apr 2024 – Present
Technical Advisor (Aug 2026 – Present) · previously Head of Technology (Apr 2024 – Jul 2026) — Monterrey

- Built the multi-tenant terminal-management platform from the first commit (~1,227 of 1,272 commits, ~166k lines, 77 data models) with Openpay, Mercado Pago and Facturama CFDI integrations.
- Led a team of ~10 engineers across Android payment-terminal apps (PAX, Sunmi EMV, MDB vending, parking, kiosks): signed-APK release pipelines, Sentry crash reporting, sprint planning.
- Introduced AI-native engineering: Claude Code PR review, CODEOWNERS guardrails, an AI-agent hiring exercise.

Caring · Software Engineer, Tech Lead — Partner Experience (contract) — Remote — Jan 2025 – May 2025
Able · Software Engineer, Tech Lead — Full-Stack Web (contract) — Remote — Nov 2021 – Dec 2024
PayPal · Software Engineer — Consumer Web Platform (contract) — Remote — Jan 2021 – Oct 2021
Independent · Remote Software Development & Consulting for US companies — Remote — 2014 – 2020

SELECTED PRODUCTS

EventKit (launching). Event ticketing: Wallet passes with rotating codes, QR check-in, Android scanner kiosk.
FanKit (in production). Loyalty cards on Apple and Google Wallet, Openpay billing, SMS/email campaigns.
Timbra Chat. AI agent that reads receipts with vision models and issues CFDI invoices in a real browser.

SKILLS

AI & agents	Claude Code, Codex, OpenCode (~3.9B tokens in 7 months); Vercel AI SDK, OpenRouter; browser and tool-calling agents, vision document intake, structured outputs, cost-capped model chains
Engineering	TypeScript, Next.js 16, React 19, Tailwind 4, Postgres (Drizzle, Prisma), Redis/BullMQ, Socket.IO, zod, Kotlin/Compose, React Native/Expo
Infrastructure	Self-hosted Linux (pm2, Docker, Cloudflare Tunnel), Vercel, DigitalOcean, GitHub Actions
Payments (MX)	CFDI e-invoicing (Facturama), STP/SPEI reconciliation, Openpay, Mercado Pago, Zoho Books
Languages	Spanish (native) · English (professional)
